FREQUENTLY ASKED QUESTIONS

SACHET SYSTEM

What Makes the Sachet System Eco Friendly?

The sachet itself is made from 100% biodegradable materials. The outer packaging is FSC certified compostable and recyclable. As each sachet is pre-dosed, this heavily reduces storage space requirements and the emissions needed to transport the goods by 95%. We also offer reusable foaming soap dispensers that completely remove the need for single use plastics!

What makes the Sachet System Revolutionary?

The Ecofy Sachet System has the potential to reduce carbon emissions by 95%, reduce waste by 90%, and reduce plastic waste by 90%. It will reduce both transport and storage costs, and is safer to use than other detergents. Further to this, the Ecofy Sachet System has the potential to significantly reduce the cost of cleaning agents!

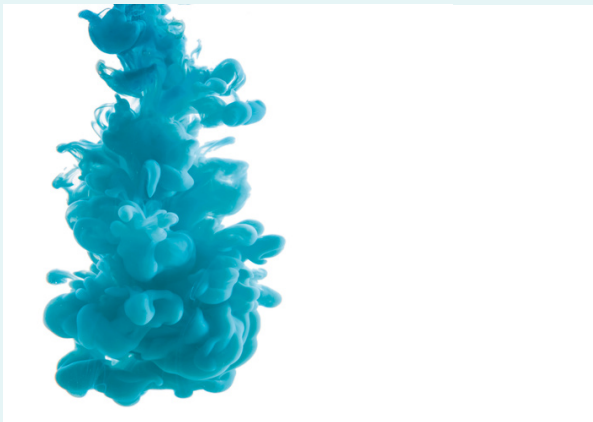

FREQUENTLY ASKED QUESTIONS

SACHET SYSTEM

Will multiple sachets together make a stronger cleaning agent?

No. Each sachet has been pre-dosed and tested to find the best results. Using more than one sachet in the recommended amount of water results in detergent over dosing, which is both bad for the environment, and a waste of resources.

Can the Sachets Dissolve in Any Water?

Yes. The sachet will dissolve in any water it is used with. However, for most effective and quickest results, we suggest using warm water and shaking the sachet to speed up the process.

What Makes Sachets Safer to Use than Other Detergents?

Thanks to the revolutionary sachet system, users no longer need to have direct contact with detergents. It's lighter size compared to pre-mixed detergents also significantly reduces the chance of manual handling risks and accidental detergent spills!
